

481473 - AS01: Investment support area not visible

Component: FI-AA-SVA (Financial Accounting > Asset Accounting > Specific Valuations), Version: 4, Released On: 25.02.2002

Symptom

When you create a fixed asset, the investment support areas are not visible as long as you have not selected the 'Allocations' tab page or the tab page on which you enter the investment support keys.

If the asset class manages investment support areas only, then the "Valuation" screen is empty. Even if you define investment support keys after you have called the empty valuation screen, no investment support areas are displayed.

Other Terms

T085P, investment support, AS01, AS02, TAMLAY

Reason and Prerequisites

Solution

Independent of the fact whether you have defined default values, or whether you have entered the values manually, or whether the values have been filled by substitution, the system only generates the depreciation areas after you have called the screen with the investment support keys at least once.

As a result, the system does not display the investment support areas when you directly branch to the depreciation area screen.

If you have defined a layout where the "Valuation" and "Investment support measures" screens are on the same tab page, you can only see the investment support areas in Transaction AS02 or AS03 after the creation.

Independent of this, the asset is saved correctly in all cases.

Attributes

Key	Value
Transaction codes	AS01
Transaction codes	AS02
